

6.8 kw Grid-Tie *Fort St. John, BC*

“For a long time, we have thought about ways to save energy and be “part of the solution”. Our investment in solar, about the same as a bathroom renovation, will mean no electric bills for years to come, and with the predicted rate hikes on the horizon, THAT is a very good thing.”

Barbara Daley

Owners: Barbara and Brian Daley, Fort St. John, BC

Description: The Daley’s have installed a grid-tied array on an east-facing roof that has essentially no shading. The steep roof slope of 33 degrees provides excellent solar exposure and good snow shedding in the winter. The SolarEdge optimizers not only insure

maximum panel efficiency, but also added safety by providing individual panel shut-down with grid failure, plus free internet monitoring that shows and records the output of every panel in the array in real time.

INCLUDED in this custom grid-tie package:

- Custom designed & supplied by Peace Energy Co-op
- Installed by PEC / Perry McFie of Haab Homes, FSJ
- (22) HES 310 watt solar modules
- (22) SolarEdge optimizers
- SolarEdge grid-tie inverter with internet monitoring
- Fast Rack roof mounting system
