

# Featured SOLAR HOME

**LOCATION:**  
Dawson Creek, BC

**REDUCTION IN  
ELECTRICITY  
COSTS:** 85%

**ARRAY SIZE:**  
15,000 watt grid-tied

**SOLAR CONTRACTOR:**  
Peace Energy Co-op  
Dawson Creek

This attractive modern home in Dawson Creek now receives 85% of its yearly electricity needs from the sun, greatly reducing the electrical bills and increasing the home's resale value.

"Thinking about going solar we had a good look at our electrical bills and were quite shocked," explains the owner.

"The financial return on our solar investment was better than any bank could offer. Solar just made sense.

"We plan to add another solar array on the west roof, which should bring us to Net Zero, meaning zero electrical bills for the life of the building! It will also provide free electricity to charge the electric car we would like to purchase soon.

"Grid-tied solar is super simple. No batteries, no worries. It's been up for several years now, and we have barely thought about it, except when we go to pay our very low electrical bills!"

And there's more good news: as the cost of regular grid power continues to increase (which it always will!) the yearly return on their solar investment will just keep increasing.

"It's great to work with local people who are dedicated to solar and are here for the long term. Thanks to Peace Energy Co-op for an excellent design, a good price on state of the art equipment and fast professional installation."
